

# wireless charging module **Porthole III**

This award winning version of Porthole takes charging to the next level - wireless! It is ideal for adapting an 80mm cable hole or for upgrading your existing Porthole and Porthole II modules.

Simply place your wireless induction charging compatible device on the charger. A beep will acknowledge the connection, LED's will illuminate around the charger's perimeter and charging will commence.

What makes Porthole III unique is that CMD have developed a wireless charger that has an integral power supply so there is no requirement for a separate device to power the module.

**Integral Power Supply**

**the ELECTRICAL industry awards WINNER 2014**

Wireless charging surface

Wireless charging surface

The lip ensures that spillages cannot enter the module

## **Wave**

### Wireless charging receiver

This new wireless charging receiver has been designed to work with our the Porthole III wireless charging module.

Simply insert the connector into the device's micro USB or Apple Lightning socket and place the wireless charging receiver in the centre of the Porthole III wireless charging module.

Micro USB Connector

iPhone5/5C/5S Connector
