

Dear Customer

Elite+ Protection Module

October 2016

CMD are pleased to announce the launch of the new retrofittable Elite RCD protection module.

This unit has 3 pole connections to allow it to be inserted into an existing desk power installation to provide RCD protection in compliance with the latest BS6396 installation standard for Electrical Installations in Office Furniture.

From December 2015 if you are connecting 13 Amp desk power modules into an existing building via a fixed installation socket (eg wall or floorbox) -then in order to comply with

BS 6396:208+A1:2015, the desk power modules must be protected by an RCD.

A fixed wiring system may already be providing RCD protection to the desk power module by one of the following:

- RCBO – at distribution board
- SRCD – at the wall socket
- SRCD at the floor box
- RCD – in the floor box
- Fuse Spur with FCURCD

How to ensure Compliance with BS 6396:2008+A1:2015

If the fixed wiring system does not include the required protection then by inserting the Elite RCD protection module under the desk in series, before the first desk socket outlet, compliance

will be achieved.

The Elite Protection Module is manufactured in nylon 6 material and has a clear, protective lid.
