

2020 Product Catalogue

Connecting Power, People and Organisations

cmd

We are a British Manufacturer founded in 1984, who create solutions to meet the challenges of integrating power and technology with furniture for commercial environments.

2

power^{modules}

A comprehensive range of under desk, in desk and desktop power modules with accessories. In desk modules are ideal for conference rooms. Desktop power modules allow for easy access for when you're working. Our under desk power solutions range from the affordable, to the more flexible metal based extrusion which can be fed from our underfloor power.

9

ergo^{solutions}

Create healthier workplaces that improve performance and bring greater productivity. Deliver a more streamlined and aesthetically appealing space whether in the office, at home or on the move. This section includes monitor arms, CPU supports, cable management solutions and accessories.

35

power^{distribution}

Our products have been designed to be easy to install over traditional cabling systems with no requirement for cable trays and complicated terminations. We also have a wide selection of accessories, tap-offs and grommets to suit every underfloor power requirement.

Recent uncertainty within the UK and European economy have undoubtedly provided us at CMD with a number of challenges.

However, any challenge brings opportunities. We have seen our export business grow beyond our original expectations and by investing in our UK manufacturing facility, we've increased our capacity to cater for what has been another record breaking year at CMD.

New product initiatives and increased global sales activities will give us the platform to further build on our proud reputation of being the market leading provider of power distribution and connectivity for the commercial office environment.

We are inspired every day by the genuine belief that we can supply a range of products and services that will change your working environment for the better – Connecting Power, People and Organisations.

CMD prides itself on being a Solution Provider, therefore in addition to providing ergonomic, power module, power distribution and lighting control solutions from our standard range, we also provide a comprehensive 'Bespoke Solution' service, incorporating Power, Data, AV & ergonomic components in a wide range of unique and innovative configurations.

As a result of ongoing investment in the latest manufacturing CNC punching and forming technology we have the ability to design and manufacture bespoke solutions, from simple bracketry to complex customer specific designs, at our manufacturing facility in Rotherham ensuring we meet the highest quality standards and lead times.

Our specialist engineering team span multiple disciplines and are united by their shared enthusiasm for quality solutions to the latest national and international standards.

We deliver a range of products and solutions which include:

- Power (UK and International configurations)
- USB charging
- Audio and Visual options (HDMI, VGA, Phono and much more)
- Data transfer
- Cable management systems
- Lighting distribution
- Protection
- Switching
- Underfloor power distribution

We are extremely proud of our heritage and have been producing customer led solutions since 1984. The images below show products that were specifically designed for clients who needed a unique solution that we were unable to provide from our standard product range.

Power Modules

On Desk | In Desk | Under Desk

BS 6396 Electrical Systems in Office Furniture and Educational Furniture

Electrical equipment and installations must be designed and tested to ensure their safety and to comply with statutory regulations, in particular the "Electricity at Work Regulations". Relevant British Standards may be used as a means of demonstrating safety and compliance with the regulations. In the case of electrical systems in office furniture and educational furniture, the relevant standard for systems connected to the mains supply by means of a 13A plug is BS 6396.

Sockets installed in office furniture are intended to supply office equipment with a rating not exceeding 5A with BS 6396 referring to all office furniture electrical installations when completed must be tested. Section 7 of BS 6396 sets out the procedures. These tests should also be carried out on reconfigured desks and screens as well as new installations. Periodic inspections and tests must be carried out to fulfil the requirements of BS 6396 and the "Electricity at Work Regulations" in maintaining a safe working environment.

The diagrams below indicate the maximum number of socket outlets that may be connected from a single power supply cable fed from a 13 Amp BS 1363 plug and their relevant fuse ratings.

BS 6396 was updated December 2015 to now incorporate RCD protection and reflect the changes which have been in place for fixed wiring installations complying to the 17th Ed IEE Wiring Regulations BS 7671, the amendment to BS 6396 now requires new Desk Electrics installations to incorporate RCD protection if the fixed wiring does not.

BS 5733

General requirements for electrical accessories

BS 5733 specifies requirements and tests to check the safety in normal use of electrical accessories which are not covered by other specific British Standards. Such accessories are intended for use in household, commercial and light industrial premises where:

- The nominal supply voltage does not exceed 250 V a.c. single-phase, 50 Hz to 60 Hz or 250 V d.c
- The rated current of the accessory does not exceed 63A

Unless otherwise stated by the manufacturer, accessories conforming to this standard are intended for connection by cables or flexible cords conforming to BS 6004. BS EN 50525 or BS 7211. BS EN 61535.

BS EN 61535

Installation couplers intended for permanent connection in fixed installations

This standard applies to two, three, four and five wire installation couplers including earth, (if provided), with a rated voltage up to and including 500V a.c. and a rated connecting capacity up to and including 10mm for permanent connection in indoor electrical installations. Installation couplers with additional contacts for voltages other than mains voltages are outside the scope of this standard.

All Products within our range which are intended for connection to the fixed wiring of the building, (such as our Betatrak® Underfloor Power Track System and Modular Lighting Systems), use components certified to BS EN 61535.

Confidence in CMD Products

At CMD our highly trained and experienced engineers are fully qualified in all aspects of compliance with BS 6396 and all of our products are manufactured to BS 5733 and where relevant to BS EN 61535 and BS 7671 to assist in supplying products to enable full compliance with the relevant electrical installation standards.

Choose from a range of UK, International, USB Charging and AV Sockets and Protection Breakers.

USB Sockets

CMD supply three different types of USB sockets; USB Type A data, USB Type A power and USB Type A and C power. Our USB data sockets require a separate USB cable, which must be connected to the back of the module and to the corresponding USB socket on a computer to allow data to be transferred to and from the module. Our USB power sockets are hardwired into the module's power supply to produce a dual port USB power supply capable of charging a wide range of devices. Please speak to our sales team for more information.

Socket Options

Design a power module to suit your needs

Switches:

- Single Pole (with or without neon)
- Double Pole (with or without neon)

International Sockets:

- French/Belgian
- German
- Italian
- Swiss
- American*
- Indian

Note: International sockets are only available in black and white but can be fitted with a black, grey or white 50mm x 50mm surround.

UK Sockets:

- Standard UK 45 and 90 degrees (Unfused)
- Standard UK fused 45 and 90 degrees (3.15A and 5A)
- T-earth 90 degrees
- T-earth 90 degrees fused (3.15A and 5A)

*A dual supply must be used when a 110V American socket is installed with a UK 240V supply.

USB Chargers:

- 5 Amp Type A USB Charger with Smart IC
- 18W Type A and C Adaptive Fast Charger

All sockets and plates are available in black, grey and white as standard.

Note: Slight colour variations may occur depending on socket type and batch number.

Data Sockets:

- RJ11
- RJ45 (Cat6 and Cat6a)
- LJ6C
- USB

Audio and Visual

- HDMI
- VGA
- 3.5mm Audio
- Phono
- S Video

While standard configurations are offered, power modules can be adapted to meet your individual requirements. Please give us a call and speak to one of our sales team to discuss your requirements.

Power Modules

Capsule on desk power module

Colour key

Capsule includes 2x UK sockets with individual switches and resettable 3A thermal fuses and includes fixing clamp and a dual port Type A and C adaptive fast charger with LED indicators. Capsule also has 2 AV blanks which can house a range of keystone sockets.

Includes desk fixing C clamp. (See page 30)

Power Distribution

Betrak Power Track | Floor Boxes | Cable Hives

Betatrak® underfloor power track

Power Tracks offer an efficient, flexible solution to underfloor power distribution as they use a click fit method for that fast and simple install. To reduce up front labour costs all Power Tracks are tested at our manufacturing facilities meaning no on site commissioning. Underfloor power solutions are also very low maintenance and exceptionally reliable making it the perfect solution in today's modern construction world.

The benefits of using an Underfloor Power Distribution System

- Choice: a comprehensive range of supply systems
- Flexibility: can be used in new or existing layouts
- Versatility: all kinds of configurations are possible including bends/corners
- Safety: colour coded tap-offs for easy recognition. Sliding dust covers to protect outlets
- Height clearance: low profile power track suitable for shallow floor voids
- Convenience: variety of Betatrak® lengths with different socket centres. 300mm standard (150mm and 600mm available on request).

The 63 Amp Betatrak® system caters for single phase standard, clean earth (CE) low noise, auxiliary, three phase or dual applications. Betatrak® comes in lengths of 1.2m, 1.8m, 2.4m or 3.6m with tap-off positions provided at 300mm as standard (Note: 150mm and 600mm available on request). As a result, the system is extremely versatile and suitable for high to low density tap-off requirements.

All integral connectors and tap-off plug sockets are colour coded to avoid any possible errors during assembly. For maximum safety each operates a shutter on insertion to ensure no accidental contact can be made.

Due to transport restrictions 3.6m length Power Tracks have a minimum order requirement of 10 lengths. Orders of less than 10 units will be supplied as 2x 1.8m lengths per 3.6m length ordered.

Betatrak® underfloor power track

Attention should be given to the total power requirements to avoid exceeding the maximum power rating of the Power Track. The following versions are available for Power Tracks:

- Standard Earth
- Clean Earth (CE) Low Noise Earth
- Auxiliary Earth
- Dual Circuit
- Three Phase

Product Range - Betatrak® Underfloor Power Track

Due to transport restrictions 3.6m length Power Tracks have a minimum order requirement of 10 lengths. Orders of less than 10 units will be supplied as 2x 1.8m lengths per 3.6m length ordered.

How to install Betatrak® underfloor power track

Starting with the feed unit, remove the dust cover over the colour coded socket and simply snap the integral coupler, pre-installed on the Power Track, into the feed socket. The next length of track is then fitted to the socket end of the first length of Power Track as previously described, this is then repeated for the following lengths until the run is complete. On the final length of Power Track section the dust cover supplied is fitted on the final unused coupling point to protect against the ingress of foreign contaminants. The feed unit is then secured via the slots in the base and the Power Track every 1200mm (max) by using the mounting brackets provided.

CMD is registered by BSI to BS EN ISO 9001 and BS EN ISO 14001. Betatrak® is designed to comply with regulation 434.2.1 of BS 7671: 2018 (IEE Wiring Regulations) and 543.7 earthing requirements for the installation of equipment having high protective conductor currents.

The scope of Reg. 543.7.1.3 requires that every final circuit is intended to supply one or more items of equipment, where the total protective conductor current is likely to exceed 10mA. in normal use, shall have a high protective connection.

Typical Floor Layouts

Power Track

3m tap-offs provide full coverage when Power Track is laid out on 5m centres.

Floor Boxes

Typical layout: 1 floor box for every 10m².

Due to transport restrictions 3.6m length Power Track have a minimum order requirement of 10 lengths. Orders of less than 10 units will be supplied as 2x 1.8m lengths per 3.6m length ordered.

	Track Coupler	0.6 mΩ
	Tap-off Connection	0.6 mΩ
	+4mm ² Cable	11.0 mΩ/m
	+2.5mm ² and 4mm ² Cable	14.5 mΩ/m
	Flexible Corner Unit	4.0 mΩ
	+10mm ² Cable	4.7 mΩ/m

Mechanical Data

Number of Copper Conductors	2, 3, or 5	
Power Track Cross-section Area	14	mm ²
Betatrak® Basing Copper Equivalent (Where casing is protective Earth)	14	mm ²
Cable Termination Capacity	16	mm ²
Tap-off Cable 32Amp (BS 7211)	4.0	mm ²
Tap-off Cable 13Amp fused (BS 7211)	2.5	mm ²
Tap-off Conduit Sizes	Ø16 or Ø20	mm
Flexible Corner Unit Cable (BS 7211)	10	mm ²
Flexible Interlink Conduit	Ø25	mm
Feed Conduit Entry	1 or 2 x Ø25	mm
IP Rating BS EN 60529	4X	
Minimum void depth (power track + tap-off)	47 (59*)	mm

Material Specification

Betatrak® Casing	Galvanised Steel
Power Track	High Conductivity Copper
Power Track Insulators and Coupling Mould	Flame Retardant Polycarbonate
Couple Contacts	Copper
Feed Unit Terminals	Brass Silver Plated
Tap-off Socket and Plug Mouldings	Flame Retardant Polycarbonate
Tap-off Shutter	Polyester
Tap-off Plug Ins	Brass
Tap-off Cable	LSOH BS 7211
Flexible Corner Cable	Tri Rated BS 6231

Ambient Temperature Control Factors

Temperature	25C	30C	35C	40C	50C
Factor	1.13	1.07	1.0	0.93	0.75

Due to transport restrictions 3.6m length Power Track have a minimum order requirement of 10 lengths. Orders of less than 10 units will be supplied as 2x 1.8m lengths per 3.6m length ordered.

CMD Tap-off

Tap-offs are colour coded and non-interchangeable between Power Track types. The slide locking, positive latching tap-off plug prevents accidental disconnection and can be added to or removed from the Power Track while the system is live. All 3 metre, 32 Amp tap-offs incorporate an unfused plug, and as standard, 16mmØ metal flexible conduit enclosing 3 metres of 4mm² cables. These units are designed to comply with Regulation 434.2.1 of BS 7671:2018 3. 5 metre unfused tap-offs are also available for use with individual track runs that are rated at no more than 32Amp, where the protection of the tap-off against both overload and fault current is provided by the track protective device.

CMD tap-off units conform to the high integrity protective requirement by virtue of using a protective conductor of 4mm enclosed within a flexible conduit, thus providing additional protection against mechanical damage.

The benefits of using a CMD Tap-off

1. Choice: a comprehensive range of supply versions
2. Flexibility: can be used in new or existing layouts
3. Safety: all units are designed to comply with regulation 434.2.1 of BS 7671: 2018
4. Convenience: all tap-offs are colour coded and non-interchangeable with slide locking and positive latching to prevent accidental disconnection

32 Amp 3 metre Tap-off

32 Amp 3 metre tap-off unit is comprised of an unfused plug with 16mmØ flexible metal conduit with integral 3m x 4mm² cables.

These units are designed to comply with regulations 434.2.1 of BS 7671:2018 by virtue of the following:

1. Maximum length of cable is <3 metres
2. Minimum risk of faults as the item is factory assembled and fully tested
3. Fully protected by flexible steel conduit located within raised access floor that offers further protection

5 metre Tap-off

Tap-off units in excess of 3 metres should only be used if they contain a fuse or the Power Track is protected by a 32Amp rated protective device.

All Tap-off units comply with 17th Edition Wiring Regulations Section 543.7 (High Integrity Earthing).

Numerous configurations of tap-off units including fuse options are available on request. Longer lengths available on request. CMD tap-off units conform to the high integrity protective requirement by virtue of using a protective conductor of 4mm enclosed within a flexible conduit, thus providing additional protection against mechanical damage.

CMD Tap-off

Attention should be given to the total power requirements to avoid exceeding the maximum power rating of the Power Track. The following versions are available for Tap-offs:

- Standard Earth
- Clean Earth (CE) Low Noise Earth
- Auxiliary Earth
- Dual Circuit
- Three Phase

Product Range - Tap-offs

*These Tap-offs have 2 circuits (1x standard and 1x clean Earth) rated at 25 Amp.

**These Tap-offs are 3 Phase (L1, L2, L3, N, E) rated at 25 Amp.

Earth Type	Track	Tap-off
Standard 63 Amp (White)		
Clean (CE) (low noise earth) 63 Amp (Red)		
Auxiliary 63 Amp (Black)		
Dual Circuit (standard/low noise) 63 Amp (Green)		
3 Phase 63 Amp (Blue)		

Mechanical Data

Tap-off cable 32 Amp (BS 7211)	4.0 mm ²
Tap-off cable 13 Amp fused (BS 7211)	2.5 mm ²
Tap-off conduit sizes	Ø16 or Ø20 mm
Tap-off socket and plug mouldings	Flame retardant polycarbonate
Tap-off shutter	Polyester
Tap-off plug pins	Brass
Tap-off cable	LSOH BS 7211
Flexible corner cable	Tri rated BS 6231

Dual Circuit Power Track is supplied with 1 standard and 1 clean circuit in the same Power Track housing so can be used with standard Earth and clean Earth Tap-offs as well as combined dual circuit Tap-offs.

ASTA Certificate of Verification Tests

Laboratory Ref. No: 45673/1

APPARATUS: Rated current 63A, rated voltage 240V/415V, rated impulse voltage 4kV, 50Hz, with a conditional short circuit rating of 16kA.
A range of underfloor power track systems and associated tap-off units.

DESIGNATION: Betrak system

MANUFACTURER: CMD Limited, Sycamore Road, Eastwood Trading Estate, Rotherham, S65 1EN

TESTED BY: kA Testing Facility, John Street, New Basford, Nottingham, NG7 7HL, UK
Prof. Ir. Damstra Laboratory, P.O Box 23, 7550 AA, Hengelo, Europalaan 202, 7559 SC Hengelo, The Netherlands
Exova (UK) Limited, 6 Coronet Way, Centenary Park, Salford, M50 1RE, UK
Exova Warringtonfire, Holmesfield Road, Warrington, WA1 2DS, UK
Exova (UK) Limited, Key Industrial Estate, Fernside Road, Willenhall, West Midlands, WV13 3YA, UK

DATE(S) OF TESTS: 26th February - 23rd August 2016

The apparatus, constructed in accordance with the description, drawings and photographs incorporated in this certificate has been subjected to the series of proving tests in accordance with:

IEC 61534-22 Edition 2.0, 2014-06 and BS EN 61534-22: 2014

Verifications with reference to the tests listed in Sub-Clause 5.3 of IEC 61534-1: Edition 2.1 2014-06

- | | |
|---|--|
| 1. Marking and Documentation, Clause 8 | 8. Insulation resistance test and dielectric strength test, Clause 15 |
| 2. Construction, Clause 9 | 9. Normal operation, Clause 16 |
| 3. Clearances, creepage distances and solid insulation, Clause 10 | 10. Temperature rise, Clause 17 |
| 4. Protection against electric shock, Clause 11 | 11. Short-circuit protection and short-circuit withstand strength, Clause 18 |
| 5. Terminals and Terminations, Clause 12 | 12. Resistance to heat, Clause 19 |
| 6. Screws, current carrying parts and connections, Clause 13 | 13. Fire hazard, Clause 20 |
| 7. Mechanical strength, Clause 14 | 14. External influences, Clause 21 |

This certificate applies only to the apparatus tested. Responsibility for conformity of any apparatus having the same or other designations rests with CMD.

Issued by Intertek, Centre Court, Meridian Business Park, Leicester, LE19 1WD.

Floor Boxes

One piece 'fast fit' (20 series) - One piece back box.

Individual 'fast fit' (20A series) - Individual box bases for each compartment.

Screed/Screw fixed/Stainless (99 series) - Screed and stainless steel boxes available. Stainless suited for more prestigious spaces e.g. reception areas.

Fully configurable floor box

- Wide range of accessory plates
- Can be prewired with Betatrak® tap-offs
- Deeper versions available

Fast fit advantages

- Quick removal with services fitted
- Installation tolerance of -0/+3mm
- Fixes to floor thickness of 15mm - 50mm

Carpet inlay

- 6.5mm

Blue/grey moulded polycarbonate ABS

- RAL 7031

Handle

- Self Closing

Robust cable outlet

- Designed with 'Anti-Trip' facility

Optional lockable lid

Added security allows access by competent personnel.

Power Distribution

One Piece floor box

Our one piece 20 Series 'Fast Fit' access floor box has been designed to meet the demands of the modern day working environment.

RCD/RCBO floor box

Our individual 20A Series 'Fast Fit' access floor box with integral Din Rail mounted RCD or RCBO protection has been designed to meet the demands of the modern day working environment. By using a modular breaker wired to normal sockets the need for expensive RCD sockets is removed. Separate removable compartments allow services to be removed whilst the floor box body and lid remain in situ.

Screed and Screw Fix floor boxes

The 93 and 99 Series range of floor boxes are available for use as either a ‘stand alone’ screed floor type or a screw fixed type suitable for raised floors. Screed floor types are supplied with jacking legs which allow 10mm adjustment for levelling with the finished floor depth and are sealed to prevent ingress of screed.

Order process - Please contact our sales team to discuss your requirements. You must check the terms and conditions on any quote before placing an order. Order details must be confirmed in writing by emailing sales@cmd-ltd.com. We’re here to help so if you have any questions, please give us a call.

Stainless Steel floor box

3 or 4 compartment stainless steel access floor boxes comprise of three distinct assemblies: the box base, the mounting frame and purpose made stainless steel frame/lid assembly. The box base has 20mm and 25mm conduit knockouts in each long side and dividing fillets that are provided to separate services. The box base is manufactured from galvanised steel and comes complete with a grid to accept interchangeable accessories.

The mounting frame is manufactured from galvanised steel and has two fixing holes in each long side. The frame/lid tray assembly is manufactured from brushed stainless steel with straight edges and cable outlet brackets in the same material. The recess in the tray lid is 23mm deep. Maximum outside size of S/S trim is 325mm x 193mm and overall box depth is 109mm. The box is provided with jacking legs for levelling and adjustment – Screed option only.

3 Compartment plates

Select from our wide range of serviced power and unserviced data options. These plates are common to most ranges - one piece, individual, screed and stainless floor boxes and slab floor boxes. Most plates are finished in textured grey (RAL 7004) but the clean plates are finished in textured red (RAL 3001).

Plate sizes - 100mm x 175mm. The plates can only be fitted in 3 compartment floor and slab boxes.

Note: Please note that, in addition to the plates listed opposite, we are able to offer a wide variety of socket, data and AV plates – please contact our underfloor sales team to discuss your requirements.

Changes to our range of floor box accessory plates

As part of CMD's commitment to continued product improvement, we have made several changes to our range of floor box accessory plates. This change will happen with immediate effect.

Standard Earth floor box accessory plates, data plates, RCD plates and blanking plates:

The colour of these plates will continue to be grey, but we have changed from RAL 7035 to RAL 7004. The paint finish of these plates has changed to textured matt to improve their durability.

Clean Earth floor box twin socket outlet and RCD socket outlet accessory plates:

The colour of these plates has changed to red RAL 3001, removing the need for a Clean Earth label. The reason for this change is to help with the visual identification of a Clean Earth plate and to bring the way we supply these plates in-line with our Betatrak® power track and Rotasoc® module power systems.

The paint finish of these plates has also changed to textured matt to improve their durability.

Standard Earth

Clean Earth

4 Compartment plates

Select from our wide range of serviced power and unserviced data options. These plates are common to most ranges - one piece, individual, screed and stainless floor boxes and slab floor boxes. Most plates are finished in textured grey (RAL 7004) but the clean plates are finished in textured red (RAL 3001).

Plate sizes - 75mm x 175mm. The plates can only be fitted in 2 and 4 compartment floor boxes and 1, 2 and 4 compartment slab boxes.

*Our white moulded twin socket with twin port USB charger is only available for our 3 compartment floor box. A minimum 50mm plug spaces is required for this plate.

Note: Please note that, in addition to the plates listed opposite, we are able to offer a wide variety of socket, data and AV plates – please contact our underfloor sales team to discuss your requirements.

Changes to our range of floor box accessory plates

As part of CMD's commitment to continued product improvement, we have made several changes to our range of floor box accessory plates. This change will happen with immediate effect.

Standard Earth floor box accessory plates, data plates, RCD plates and blanking plates:

The colour of these plates will continue to be grey, but we have changed from RAL 7035 to RAL 7004. The paint finish of these plates has changed to textured matt to improve their durability.

Clean Earth floor box twin socket outlet and RCD socket outlet accessory plates:

The colour of these plates has changed to red RAL 3001, removing the need for a Clean Earth label. The reason for this change is to help with the visual identification of a Clean Earth plate and to bring the way we supply these plates in-line with our Betatrak® power track and Rotasoc® module power systems.

The paint finish of these plates has also changed to textured matt to improve their durability.

Standard cable hives

Standard 127mm cable hives are an alternative to floor boxes and slab boxes for taking underfloor power to under desk level. They offer an ideal solution for a fast, simple and unobtrusive installation. Easy to install and relocate if necessary, cable hives are ideal for any office power requirements. Most plates are finished in textured grey (RAL 7004) but the clean plates are finished in textured red (RAL 3001).

The maximum number of conduits that will fit a standard cable hive (PPHC261G Soft Foam) when the lid is in place is as follows:

- 8 x 16mm
- 3 x 20mm
- 2 x 25mm
- 2 x 32mm

Note: Our angled standard RCD Cleaners Hive has been designed to allow the fitment of moulded 13A plug tops with strain relief without stressing the flex hence its new angled design. Designed to power 230V vacuum cleaners.

A Female Neutrik plug is required to supply power. Please ask for part code PXO2132GR for use with Clean Earth underfloor Power Tracks and Tap-offs and part code 440713 for use with Standard, Auxiliary Earth and Three Phase underfloor Power Tracks and Tap-offs.

Power Hub distribution unit

The 32A Power Hub system has been designed for buildings where a conventional Power Track system can't be installed due to height restrictions, obstacles in the floor void or where the slab is uneven. This system is also used where a modular solution is preferred. This low profile 38mm high power hub utilises connectors complying with BS EN 61535 and is made from 0.9mm galvanised steel to provide a strong and robust solution and comes complete with 3 retractable fixing brackets.
